

WARNEX

ROBUST. DURABLE. OUTSTANDING.

WARNEX coating system

APPEARANCE & FUNCTION

At professionally organised events, every detail counts – even the appearance of a loudspeaker. WARNEX textured coatings give loudspeakers the durability they need to withstand everyday touring. On the other hand, the slightly grainy structures make them appear in decorative ways, suitable for all kind of stages.

The WARNEX system was specially developed for the music and event industry. It fits perfectly into almost any stage and room architecture and is still robust enough for indoor and outdoor use, even for tours and concerts.

WOOD & MDF

Robust surface protection for all types of wood-based materials in the industry.

Just as the WARNEX system has proven itself in the professional event and music industry, all other branches of industry also appreciate the product benefits such as robustness, reparability and visual flexibility.

WARNEX textured coatings are developed according to strict quality criteria. Reliable protection against surface damage and minimised manufacturing costs thanks to simple and efficient painting processes are two compelling arguments.

**Concert hall/
open air**

Whether in a concert hall or at open air events, on tour, in the studio or rehearsal room: WARNEX textured coatings reliably protect audio equipment from knocks, damages and environmental influences. If something does happen, the WARNEX system can be used for quick and easy repairs.

Both Professional concert organisers and amateur musicians rely on the tried and tested WARNEX textured coatings. A flawless performance is therefore guaranteed at all times and on every stage.

At home on any stage

Unlimited variety of colours

The WARNEX product systems are flexible tintable via the mixing system Pro Mix® Aqua – even in very small quantities.
